

Subject: Analysis Summary and Additional Data Requirements for Gala Groceries Project

Dear [Data Science Team Leader,

I hope this email finds you well. I have completed the initial analysis of the dataset provided by Gala Groceries, focusing on the stock management and supply chain issue.

Based on the available data, I have generated several visualizations and gained valuable insights. Here is a summary of my findings:

- **Category Distribution:** The "Category per Transaction" plot reveals that the best-selling categories are fruits and vegetables, while spices and pets have the lowest sales.
- **Customer Type Analysis:** The "Customer Type per Transaction" plot indicates that non-members and standard customers have a higher number of transactions compared to other customer types.
- **Unit Price and Total Amount Analysis:** The line chart depicting the relationship between unit price and total amount suggests that the value of quantity remains constant, while the total amount increases.
- **Payment Type Analysis:** The visualization of "Payment Type per Transaction" shows that cash is the most frequently used payment method.

Overall, these visualizations provide insights into the sales trends and customer behavior, highlighting the importance of optimizing the stock management strategy.

Furthermore, I would like to mention that the dataset provided has a shape of (7829, 10), indicating that it consists of 7829 rows and 10 columns.

To further analyze and address the stock management issue effectively, I recommend obtaining additional data, including:

- **Supplier Data:** Information about suppliers, including availability, lead times, and reliability.
- **Inventory Data:** Stock levels, replenishment rates, and historical sales data to analyze stock movements.
- **Demand Forecasting:** Insights into customer demand patterns, seasonality, and trends to optimize stock levels.
- **Operational Constraints:** Information about storage capacity, shelf life of perishable products, and handling constraints.
- **Market Trends and Competition Analysis:** Understanding customer preferences, market dynamics, and competitor strategies to identify potential areas for improvement.

By incorporating this additional data, we can enhance our analysis and provide specific recommendations to address Gala Groceries' stock management challenges effectively.

I appreciate your guidance in obtaining the necessary data and your support in further refining the analysis.

Once we have gathered the required information, I will provide a detailed report outlining our findings and recommendations.

Thank you for your attention to this matter.

I look forward to your feedback and further collaboration on this project.

Best regards,

Judith Boluwatito TOBOGBE

Junior Data Scientist
